“built in **safeguards** voice and text prompts”

“early crucial care”

“prolonging lives”

“essential health and safety support”

AEDs (Automated External Defibrillators) are helping to meet the challenge of providing early, crucial care and increasing the survival rates of cardiac arrest victims. They are now regarded as relevant as sprinkler systems, smoke and fire alarms and an essential item of office equipment for any organisation.

In simple terms, an AED will prolong the chance of survival for any cardiac arrest victim. Text and voice prompts and built in safeguards ensure that those with just a little training can use the unit safely and effectively.

£9.99
per week
(includes training for 6 people)

Can you afford to live without this emergency service?

157,000 people die each year from cardiac arrest. In an organisation dedicated to saving and prolonging lives, can you really be without one?

The UK's target time for an ambulance to reach an incident is 8 minutes.

Why wait?

Time saves lives!
